1. INTRODUCTION

1.1 Project Overview

Creating a device that can be followed using GPS locations and has a panic button to inform the parent via a GSM module, this invention is primarily focused on improving child safety. An Android app for parents is created to control and monitor the device at any time. Smart gadget devices are always connected to parents' phones, which can receive and make phone calls as well as SMS gadget via a GSM module. Additionally, wireless technology is implemented on the device, which is useful to bind the device within a region of monitoring range; if the device is moving out of monitoring range, an alert will be triggered on a binding gadget, helping you maintain a virtual watch over the child. An alert will be sent to a bound device if the device moves outside of the monitoring range, allowing you to keep a virtual check on the child. Devices come with a health monitoring system that checks for factors including heart rate, pulse, and temperature. The parental app allows for the monitoring of these indicators. Using a contact switch, the device also keeps track of whether or not it is plugged in and notifies the parent the moment it is unplugged.

1.2 Purpose

Approximately 80% of all reports of child abuse are made Nowadays, with 74% of the victims being girls and the remaining 20% being males. In this world, a child goes missing every forty seconds. Children are the foundation of a country; if their future was threatened, it would have an effect on the development of the whole country.

The emotional and mental stability of the children is compromised as a result of the abuse, ruining their futures and careers. The things that happen to these defenseless kids are not their fault. Therefore, parents are in charge of raising their own children. However, parents are compelled to seek money because of the state of the economy and their desire to concentrate on their child's future and job. Consequently, it becomes challenging for them to constantly cling to their kids. We have created a setting in our system where this issue can be effectively solved. It enables parents to keep a close eye on their kids in real time while concentrating on their own careers without having to take any physical action. In essence, kids cannot tell their parents about the abuse they experience on a regular basis. They are too young to really comprehend what truly occurs to them. Parents find it challenging to recognize when their children are being abused. So, the main objective of this module is to help working parents to be free from worry about their children by tracking their movements at any time. An autonomous real-time monitoring system is required for every child worldwide in order to stop attacks on children.

2. LITERATURE SURVEY

[1] **Authors:** Akash Moodbidri, Hamid Shahnasser

Title: Child safety wearable device.

Published in: 2017 IEEE. This gadget is designed to make it easier for parents to find their kids.

There are already a lot of wearables available on the market that may be used to track children's daily activity as well as to locate them utilizing the Wi-Fi and Bluetooth capabilities of the device.

Merits: The advantage of this wearable over others is that it can be operated with any phone; a high-end smartphone is not necessary, and it doesn't require a person to be highly tech knowledgeable.

Demerits: Due to its low battery life, this device.

[2] **Authors:** M Nandini Priyanka, S Murugan, K. N. H. Srinivas, T. D. S. Sarveswararao, E. Kusuma Kumari.

Title: Smart IoT Device for Child Safety and Tracking.

Published in: 2019 IEEE.

The Link-It ONE board, programmed in embedded C, is used to construct the system. It is connected to temperature, heartbeat, touch, GPS, GSM, and digital camera modules. The work is innovative in that when a child is in need of rapid attention during an emergency, the system instantly notifies the parent or caregiver by sending an SMS.

Merits: The child's heartbeat, temperature, and touch are employed as parameters in a parametric analysis, and the results are shown.

Demerits: To put in place an IoT gadget that offers a comprehensive remedy for issues with child safety.

[3] **Authors:** Dheeraj Sunehera, Pottabhatini Laxmi Priya.

Title: Children Location Monitoring on Google Maps Using GPS and GSM.

Published in: 2016 IEEE.

This study offers parents an Android-based tool to follow their kids in real-time. Through internet-connected channels, various gadgets can communicate with one another. The concerned gadget has an internet connection to the server. Parents can use the gadget to keep track of their kids in real-time or to protect ladies. The location services offered by the GSM module are used in the suggested solution. It enables parents to receive an SMS with their child's location information.

Merits: Uses an Android terminal and ad hoc networks, a child tracking system.

Demerits: This device cannot be used in rural areas.

[4] **Authors:** Aditi Gupta, Vibhor Harit.

Published in: 2016 IEEE.

Title: Child Safety & Tracking Management System by using GPS.

This study offered a model for child safety using smartphones that give parents the option to track their children's whereabouts as well as the ability for kids to send a fast message and their current location in case of an emergency via Short Message Services.

Merits: The benefits of smartphones that offer a wealth of capabilities like GPS, SMS, Google Maps, etc.

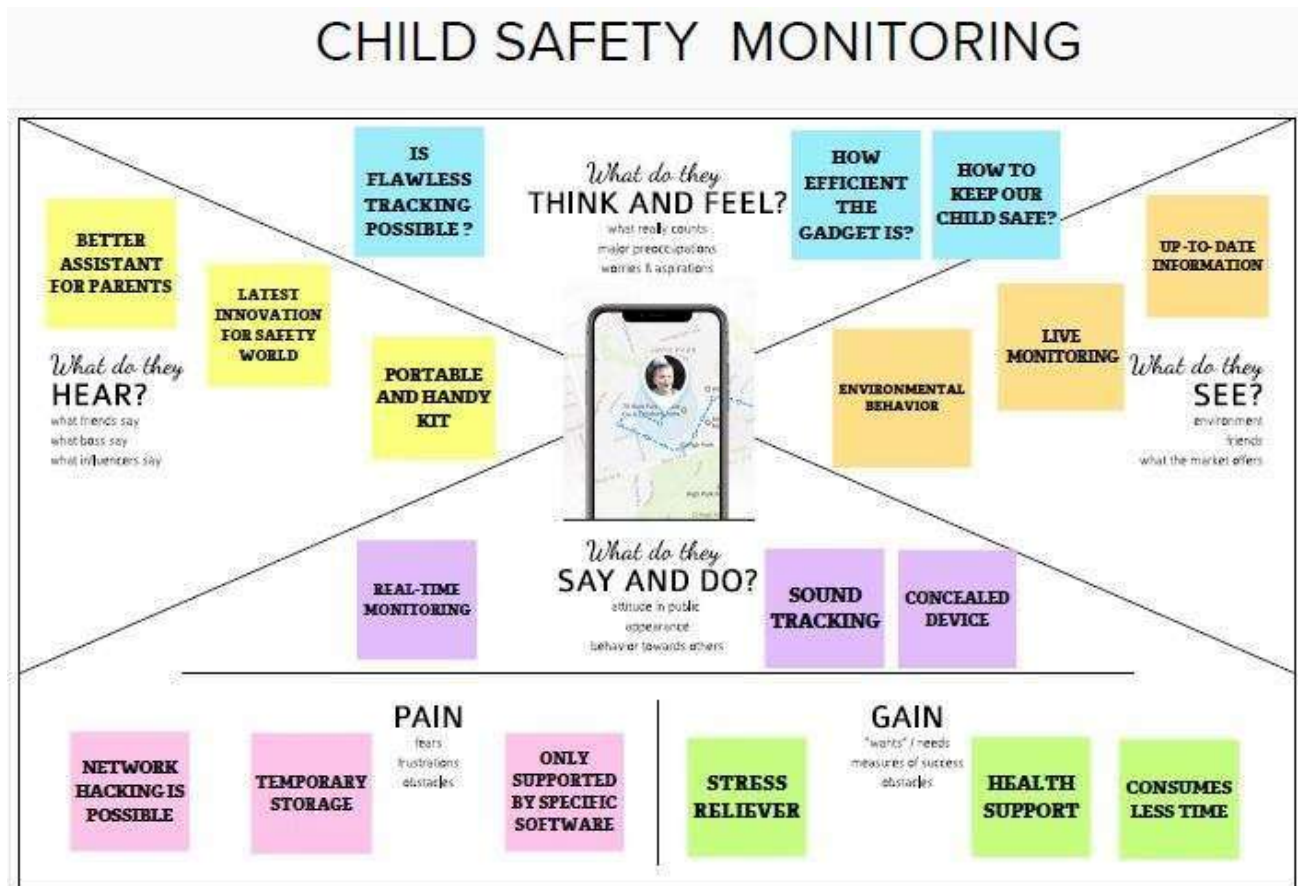

Demerits: This system is unable to detect child-like human behavior.

3. IDEATION AND PROPOSED SOLUTION

3.1 Empathy map canvas

3.2 Ideation and brainstorming

Brainstorm:

G. THARUNYA

S. DHARANI

M.RAMYA

A.S SELVASUDHA

3.3 Proposed solution

S.No .	Parameter	Description
1.	Problem Statement (Problem to be solved)	To prevent children for abuse and make them safe
2.	Idea / Solution description	compact wearable gadget with pressure button which can the parents can find the ahacker easier
3.	Novelty / Uniqueness	Pressure button with Gsm
4.	Social Impact / Customer Satisfaction	It is useful to working parents when they are leaving children
5.	Business Model (Revenue Model)	wearable gadget
6.	Scalability of the Solution	compact and easy to use

3.4 Problem solution fit

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) <small>Who is your customer? i.e. working parents of 0-5 yrs olds</small> Parents CS: working parents whose children are 0-5yrs	6. CUSTOMER CONSTRAINTS <small>What constraints exist? your customer: time taking action to find their solution is essential? i.e. spending money, budget, on call, internet, connections, available devices</small> Budget CC: The average visit of duration or last date of visit of customers	5. AVAILABLE SOLUTIONS <small>Which solutions are available to the customer when they face the problem? or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital monitoring</small> Wearable gadget-pressure sensor AS: Today, the recent technology which helps in wearable gadget is IOT based pressure button, where in past days it is not implemented, because of which children can be safe	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS <small>Which jobs to be done (or problems) do you address for your customer? There could be more than one, explore different roles</small> Creation of pressure sensor J&P: The user can apply pressure to the device by squeezing and pressing and detect and call to the parents or guardian	9. PROBLEM ROOT CAUSE <small>What is the root reason that this problem exist? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in requirements</small> Child monitoring RC: Due to the attackers, the for children is difficult, so, in order to overcome this, we have found latest technology of wearable child monitoring system	7. BEHAVIOUR <small>What does your customer do to address the problem and get the job done? Identify helpful, find the right tool (pen, mobile, calculator, paper and lines etc, identify associated customers spend time on substituting work i.e. Government)</small> Better maintenance BE: 1) In order to protect children 2) Parent's should do proper maintenance	Focus on J&P, TR, BE, understand RC
Identify strong TR & EM	3. TRIGGERS <small>What triggers customers to act? i.e. seeing their neighbor installing solar panels, reading about a more efficient solution in the news</small> TR: On by watching neighbors	10. YOUR SOLUTION SL <small>If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behavior.</small> SL: The perfect output of my problem solution is designing a IOT based wearable gadget with pressure sensor, to monitor children from attackers and thief	8. CHANNELS BEHAVIOR CH 8.1 ONLINE <small>What kind of actions do customers take online? Extract online channels from #7</small> CH: A quick response to queries 8.2 OFFLINE <small>What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.</small> They have to take risk	Identify strong TR & EM
	4. EMOTIONS: BEFORE / AFTER EM <small>How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure, confident, in control - use it in your communication strategy & design</small> EM: BEFORE: Insecure AFTER: feeling secured, happy			

4.

REQUIREMENT ANALYSIS

4.1 Functional requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Notification	Notification Via Mobile App and normal message
FR-4	Monitoring	App to monitor the child location
FR-5	Health monitoring	Heart beat rate , Temperature

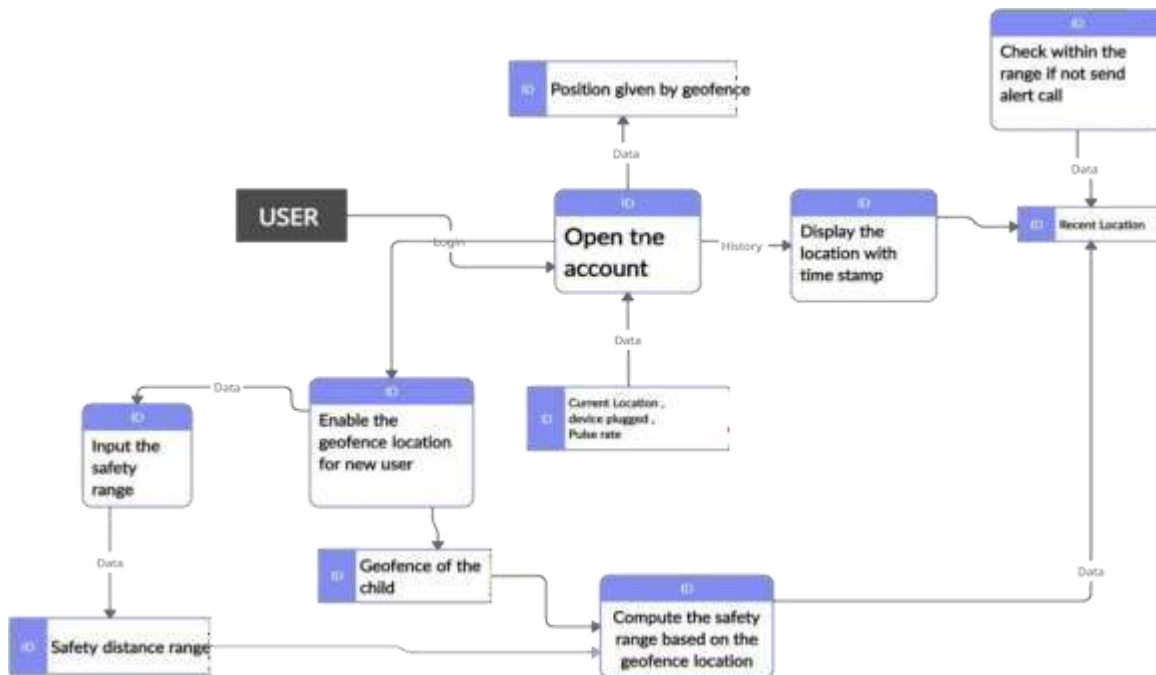

4.2 Non-Functional requirements

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	This model has GSM that can help to notify the parents in case of emergency or the smart band not connected
NFR-2	Security	Parents can feel secure because if the child forget or not connect the band it

		will notify the parents and if panic Button is pressed it will send alert message and parents able to track the location
NFR -3	Reliability	<ul style="list-style-type: none"> • Easy to use • Portable • Flexible • Cost effective
NFR -4	Performance	<ul style="list-style-type: none"> • Create a Child tracker which helps the parents with continuously monitoring the child's location. • The notification will be sent according to the child's location to their parents or caretakers.
NFR -5	Availability	<ul style="list-style-type: none"> • Track your child even in a crowd • Know the current location
NFR -6	Scalability	<ul style="list-style-type: none"> • This model ensures the safety and tracking of the children. Parents need not worry about their children.

5. PROJECT DESIGN

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the test tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

5.2 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1 (FATHER)	As a user, I can register by entering my email, and password, and confirming my password. I can access the location	I can access my account/ Dashboard and receive a confirmation email & click confirm	High	Sprint-1

The diagram illustrates a GeoFencing system architecture. It shows a user at a computer performing 'Route Planning', which connects to a 'Map Server' via a 'Wireless Network/Internet'. The system also involves GPS satellites, a mobile device, and a 'GeoFencing area' containing a truck and a building.

			of the children using the credentials provided as a Father.			
		USN-2 (MOTHER)	As a user, I can register by entering my email, and password, and confirming my password. I can access the location of my children using the credentials provided as a Mother.	I can access my account/dashboard and receive a confirmation email & click confirm	High	Sprint-1

		USN-3 (GUARDIAN/CARETAKER)	As a user, I can monitor the children's activities Using a safety gadget monitoring system.	I can access my account/dashboard and receive a confirmation email & click confirm	Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering my email & password.	I can access my account/dashboard.	Medium	Sprint-2
	Dashboard	USN-5	As a user, I can fix the geofence for my child's location so	I can monitor the current location of my child.	High	Sprint-2

			<p>that I will receive alerts if my child crosses the geo-fence and monitor the child's pulse and check whether the device Is plugged in or not.</p>			
--	--	--	--	--	--	--

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint planning and estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration (Parent Mobile User)	USN-1	Registering for an application, as a user we can register by entering our email, password and again, we need to confirm the password	3	High	Tharunya.G
Sprint-1	Login	USN-2	If we have registered for the application as a user a confirmation mail will be received to our mail	3	High	Dharani S
Sprint-2	User Interface	USN-3	Using Facebook, we can register for This application	3	Low	Ramya.M
Sprint-1	Data Visualization	USN-4	We can also register for the application through Gmail	3	Medium	Selva sudha.A.S
Sprint-3	Login	USN-5	As a user, I can log into the application by entering email	3	Low	Tharunya G

Sprint-1	Dashboard	USN-5	We need to be able to view the function that can perform	4	High	Dharani S
Sprint-2	Notification	USN-1	Using minimum time, we should be able to notify their parent and guardian	4	High	Ramya.M
Sprint-1	Store data	USN-2	We need to continuously store location data into the database	3	Medium	Selva sudha.A.S
Sprint-4	Web UI	USN-3	We all will need a friendly interface to view and access the resource easily	3	Medium	Tharunya G
Sprint-3	Registration (Parent Web User)	USN-1	By entering email and password we can log into the application as a user	3	High	Dharani S
Sprint-2	Login	USN-2	Using minimum time, we need to login to registered account via web page	3	High	Ramya.M
Sprint-4	Web UI	USN-3	To easily view and access the resources we need a user-friendly interface application	3	Medium	Selva sudha.A.S

6.2 Sprint Delivery schedule

Sprint	Total Points	Story	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20		6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20		6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20		6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20		6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

7. CODING & SOLUTIONING

(Explain the features added in the project along with code)

7.1 Feature 1: **(Adding Geofence)**

- Geofence is like a round wall covering the given location. So parents can use them to mark the location where their children are going.
- Multiple Geofence can be added

CODING:

Package

```
com.example.geofence;      import
android.app.PendingIntent;  import
android.content.Context;    import
android.content.ContextWrapper;
import android.content.Intent; import
android.widget.Toast;
```

Import

```
com.google.android.gms.common.api.ApiException;    import
com.google.android.gms.location.Geofence;           import
com.google.android.gms.location.GeofenceStatusCodes; import
com.google.android.gms.location.GeofencingRequest;   import
com.google.android.gms.maps.model.LatLng;    public    class
GeofenceHelper extends ContextWrapper {
```

```

private static final String TAG = "GeofenceHelper"; PendingIntent
pendingIntent;

public GeofenceHelper(Context base) {super(base);
}

public GeofencingRequest getGeofencingRequest
(Geofence geofence) { return new GeofencingRequest.Builder()
.addGeofence(geofence)

.setInitialTrigger(GeofencingRequest.INITIAL_TRIGGER_ENTER)
.build();
}

public Geofence getGeofence(String ID, LatLng latLng, float radius,
int transitionTypes) {
return new Geofence.Builder()
.setCircularRegion(latLng.latitude, latLng.longitude, radius)
.setRequestId(ID)
.setTransitionTypes(transitionTypes)
.setLoiteringDelay(5000)
.setExpirationDuration(Geofence.NEVER_EXPIRE)
.build();
}

public PendingIntent getPendingIntent() {if
(pendingIntent != null) {

```

```

        return pendingIntent;
    }

    Intent intent = new Intent(this,
GeofenceBroadcastReceiver.class);

    pendingIntent = PendingIntent.getBroadcast(this, 2607, intent,
PendingIntent.FLAG_IMMUTABLE);

    return pendingIntent;
}

public String getErrorString(Exception e) {if (e
instanceof ApiException) {
    ApiException apiException = (ApiException) e;
    switch (apiException.getStatusCode()) {
        case GeofenceStatusCodes
            .GEOFENCE_NOT_AVAILABLE:    return
"GEOFENCE_NOT_AVAILABLE";
        case GeofenceStatusCodes
            .GEOFENCE_TOO_MANY_GEOFENCES:
return "GEOFENCE_TOO_MANY_GEOFENCES";
        case GeofenceStatusCodes
            .GEOFENCE_TOO_MANY_PENDING_INTENTS:
            return "GEOFENCE_TOO_MANY_PENDING_INTENTS";
    }
}
}

```

7.2 Feature 2

(Alert Notification)

- Once geofence is added , when the child enters the geofence a notification will be sent
- When the child leaves the geofence a notification will be sent .

```
package com.example.geofence; import
android.content.BroadcastReceiver; import
android.content.Context; import android.content.Intent;
import android.location.Location; import
android.os.CountDownTimer; import android.util.Log;
import android.widget.Toast; import
com.google.android.gms.location.Geofence; import
com.google.android.gms.location.GeofencingEvent import
java.util.List; import android.os.Handler;

public class GeofenceBroadcastReceiver extends BroadcastReceiver {private

static final String TAG = "GeofenceBroadcastReceiv";

@Override

public void onReceive(Context context, Intent intent) {

// TODO: This method is called when the BroadcastReceiver is
receiving

// an Intent broadcast
```

```

        int toastDurationInMilliseconds = 1200000; mToastToShow
= Toast.makeText(context, "GEOFENCE_EXITED",
        Toast.LENGTH_LONG);
        // Set the countdown to display the toast
        CountdownTimer toastCountDown;
        toastCountDown = new
        CountdownTimer(toastDurationInMilliseconds, 100000) {public
        void onTick(long
millisUntilFinished) { mToastToShow.show();
        }

        public void onFinish() {
            mToastToShow.cancel();
        }
    };
        // Show the toast and starts the countdown
        mToastToShow.show();
        toastCountDown.start();*/
        NotificationHelper notificationHelper = new NotificationHelper(context);
        notificationHelper.sendHighPriorityNotification("GEOFENCE_TRANSITION_ENT ER",
        "", MapsActivity.class); GeofencingEvent

        geofencingEvent =

```

```

        GeofencingEvent.fromIntent(intent);

        if (geofencingEvent.hasError())
            Log.d(TAG, "onReceive: Error receiving geofence event...");return;
    }

    List<Geofence> geofenceList
=
    geofencingEvent.getTriggeringGeofences();for
        (Geofence geofence:
geofenceList) {
            Log.d(TAG, "onReceive: " + geofence.getRequestId());
        }

    //      Location  location  =  geofencingEvent.getTriggeringLocation();int
        transitionType = geofencingEvent.getGeofenceTransition();

        switch (transitionType) {

        case

            Geofence.GEOFENCE_TRANSITION_
ENT
notificationHelper.sendHighPriorityNotification

                ("Entered    the    Location",    "",
MapsActivity.class);

```

```
        break;

        case Geofence.GEOFENCE_TRANSITION_EXIT:

            notificationHelper.sendHighPriorityNotification("Exited
the Location ", "", MapsActivity.class);

            break;
    }
}
}
```

8. TESTING

8.1 Test Cases

Test case ID	Feature Type	Component	Test Scenario	Pre-Requrite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)
LoginFmg_TC_01	Functional	Home Page	Verify user is able to see the Login/Signup popup when user click on logo		1.Enter App 2.Verify login/signup popup displayed or not		Login/Signup popup should display	Working as expected	Pass		Y

9. RESULTS

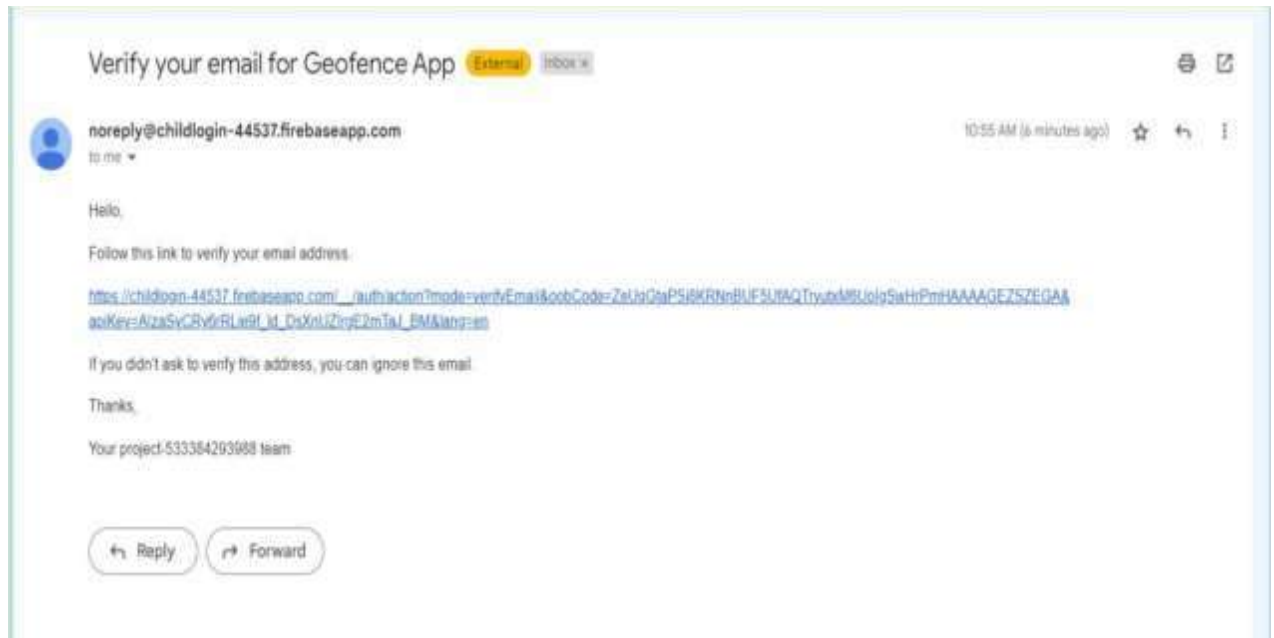

9.1 User Registration:

Users get registered to the app using their mail and create their password. On the user is registered a verification mail will be sent to the user mail id. The user needs to verify the account. All user details are stored in the firebase and verification mail is sent by firebase authentication.

1. Registration Page:

A screenshot of a mobile application's registration page. At the top, a purple header bar contains the word "Geofence" in white. Below the header is a cartoon illustration of a boy with brown hair, wearing a yellow shirt and blue pants, with his arms outstretched. Underneath the illustration is the word "Register" in a green, bold font. Below this are two white input fields with rounded corners: the first is labeled "Email" and the second is labeled "Password". Below these fields is a solid purple button with the word "REGISTER" in white, uppercase letters. At the bottom of the form area, the text "Already registered" is followed by a green link that says "Login here". The bottom of the screen shows a standard Android navigation bar with icons for home, back, and other app functions.

2. Verification mail

1. User Login

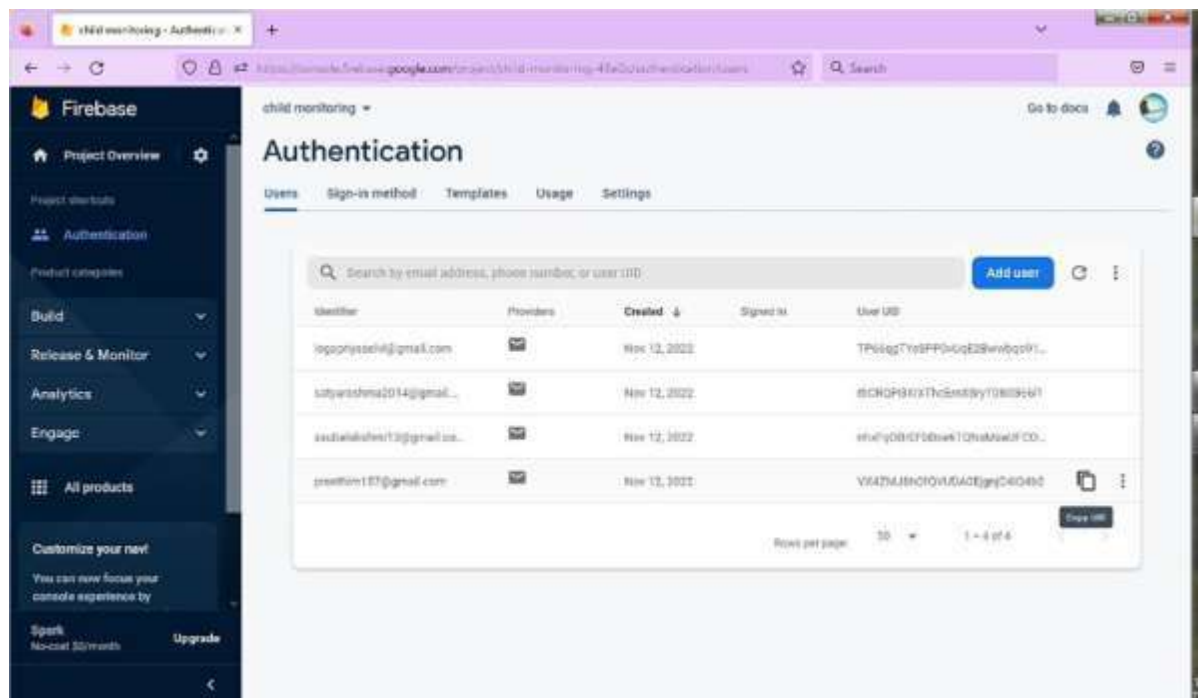

Users with their registered mail and password will login to the account . As the details are stored in firebase, when invalid email or password is entered a message say invalid email or password occurs.

2.Login page:

The image shows a mobile app login screen for 'Geofence'. At the top, there's a status bar with the time 12:26 and various icons. Below it, the app name 'Geofence' is displayed in a purple header. The main content area features a cartoon illustration of a boy with brown hair, wearing a yellow shirt and blue pants, standing with his arms outstretched. Below the illustration is a large green 'Login' button. Underneath the button are two input fields: 'Email' and 'Password'. At the bottom, there's a purple 'LOGIN' button and a link that says 'Not registered yet? Register here'.

User Details

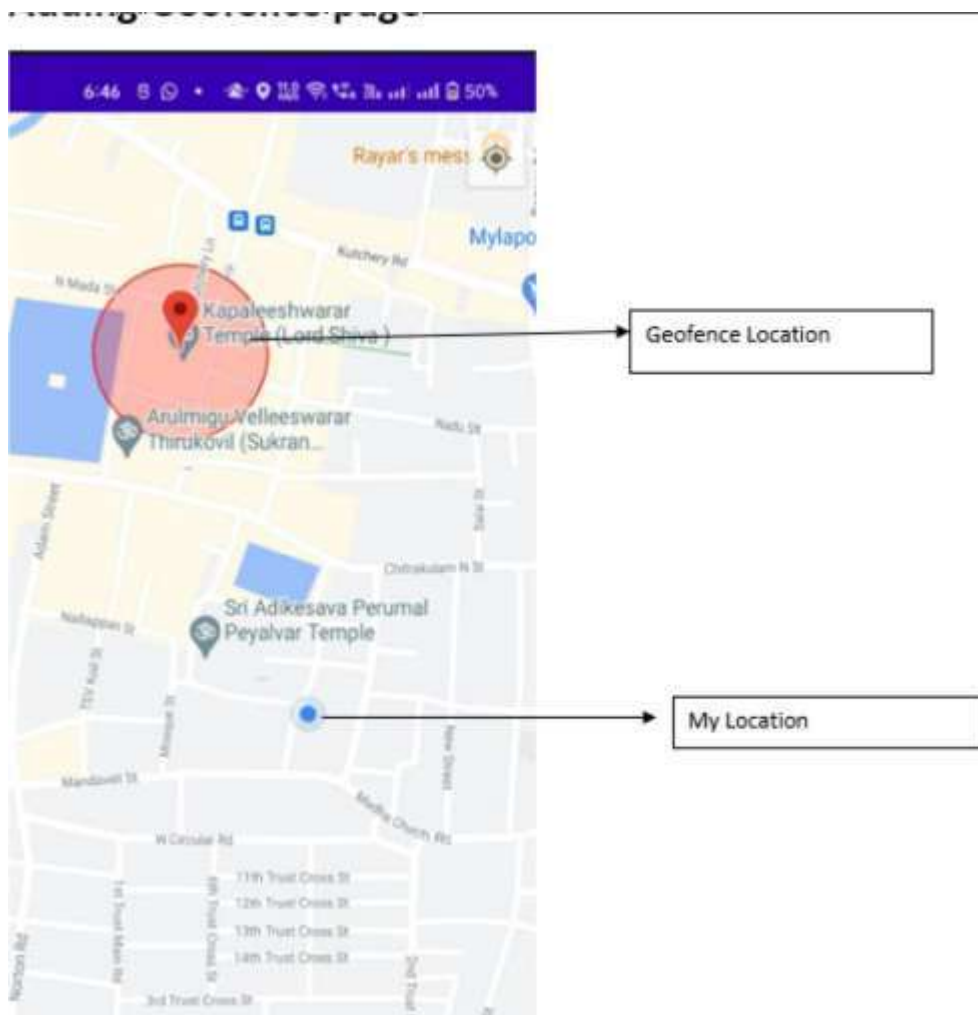

The image is a screenshot of the Firebase Authentication console. The left sidebar shows the 'Authentication' section selected. The main area displays a table of users. The table has columns for 'Identifier', 'Providers', 'Created', 'Signed in', and 'User ID'. There are four rows of user data. At the bottom right, there's a 'Rows per page' dropdown set to 30 and a '1 - 4 of 4' indicator.

1. Adding Geofence and Alert Notification

Users can add geofence in the location where they want to add or where their child is going to play so they can monitor the child location . Once the child enters the geofence alert notification says entered the location will be displayed . When the child leaves the geofence alert notification says exited the location will be displayed.

Geofence

Notification

10. ADVANTAGES AND DISADVANTAGES

The parent can monitor their child from anywhere at any time, and also get a notification when the child goes away from the permitted radius. It also allows the parent to know if their child is in any dangerous situation. The disadvantages of this system are that the child could not produce the exact alert command during a panic condition. The command produced may not match the previously stored command. This project requires manual intervention.

11. CONCLUSION

Future is similar to the word children. Young people are the future pillars of one's nation, as Dr. A.P.J. Abdul Kalam once said, thus it is important to protect today's children's dreams and lives in order to give them a better future. Therefore, every parent should take good care of their own children to prevent them from being victims of abuse that will completely harm them on a physical, mental, and emotional level, wrecking our future. Due to the significance of our future, our product makes it simple for parents to track their kids and regularly visually monitor them, enabling them to assure their safety and lowering the incidence of child abuse.

13. FUTURE SCOPE

In our system, we use the Internet of Things, GPS, GSM, and Raspberry Pi to automatically monitor the youngster in real time. When we utilize a web camera and GPS to actively monitor, this system needs network

Connections, satellite communication, and a high-speed data connection. It is challenging to keep an eye out for any network problems or satelliteconnection problems. Additionally, there is a lag when streaming videos throughthe server. The Zigbee concept or accessing the system without the internet and employing high-speed server transmission can therefore be used in the future to solve these problems.
